

modular Skidded SYSTEMS

A&B Process Systems offers custom fabrication of complete process systems into skidded modular process systems, creating compact, efficient and ergonomic work environments while reducing downtime at installation and start-up.

Benefits:

- Modular design reduces field downtime and installation costs.
- Custom design and fabrication of simple portable process modules to large scale process systems.
- All inclusive tanks, pumps, valves and controls are pre-assembled on a tubular steel frame.
- Factory Acceptance Testing (FAT) completed at A&B prior to installation.
- User friendly operation and controls with on-site training.
- Flexible design integrates into existing equipment and allows for easy expansion.

Downtime
is wasted time.

Providing the highest quality systems—
made with the best materials and
fabricated by the best people in the
industry.

Building Quality Solutions.
