

Known for Reliability Since 1921

The BIRO F2000N, F3000N, F4000N & HD3000EHN Food / Patty Forming Machines are designed for production of a wide variety of meat and food products, with maximum production output capability from approximately 2000 to 4000 formed products per hour. A large number of drum mold die shapes are available. They vary from the standard round shapes of different diameters, to special shapes such as square, oval, rectangle, fish, cutlet, heart, chicken leg, chicken nuggets, rabbit, bone, tree, pork chop, etc. Call factory for more information.

The key feature of this machine is the design of the Mold (die) in the drum. The operator can select product weights by changing the drum die depth (thickness) up to $\frac{3}{4}$ " (19mm). You do not need different die cups and plates each time you want to change weights. The Food Former Models are compact, have a small foot print, and are easy to clean-up. They are reliable, versatile and are a real Value-Added Profit Center all their own.
